 **Abstract:**

PURPOSE: To reduce the man-hour at the time of assembling and to realize an inexpensive spoiler of a magnetic disk device by forming the spoiler together with a housing as one body.

CONSTITUTION: A spoiler 27 is formed together with a housing 20 as one body and is extended among magnetic disks 22. At the time of building-in of the magnetic disk device, an assembly A where magnetic disks 22 are attached to a spindle motor 28 is set to the housing 20 so that magnetic disks 22 are arranged between extended parts of the spoiler 27. Bushings 30 and 31 to fix the assembly A to the housing 20 are attached with screws 33 to 36, and a housing 21 is attached to the housing 20. Thus, trouble to build in the spoiler is unnecessary to reduce the assembling cost.
